

Product description

Acoustic insulation for wall bottom rails. Wall tape is self-adhesive on one side and is made of SBR fibres and granular rubber. Wall tape provides good structure-borne noise insulation despite being relatively thin.

Application

Wall tape is used as a structural soundproofing material under plaster walls in buildings. Wall tape acoustically separates plaster wall bottom rails from the floor. Wall tape is affixed under the bottom rail of plaster walls.

Fire performance

Wall tape has a B2 fire rating according to DIN 4102.

Specifications

- Thickness 3 mm
- Width 50 mm
- Roll length 20 m
- Dynamic stiffness per linear meter 3500 N/mm
- Typical bottom rail MSK 45
